

ONLINE PLATFORM FOR DESSERT PRODUCTS

ABSTRACT

The Online Platform for Dessert Products is a project designed to help a nearby bakery grow by making ordering easier and more accessible. The platform allows customers to place either bulk orders for events or individual orders for personal use. It features an easy-to-use interface to browse bakery items, check availability, and place orders. Customers can view detailed product information, explore special offers, and enjoy secure online payments for a hassle-free experience. Other features include real-time order tracking, inventory management, and customer support to ensure smooth and reliable service. Built using Angular, MongoDB, Express, and Node, the platform is fast, secure, and scalable, helping the bakery reach more customers and expand its business in the digital world.
