WEBSITE FOR MURUGAN BISCUITS BAKERY

ABSTRACT

The project for Murugan Biscuits Bakery focuses on creating a web application using the MEAN stack (MongoDB, Express, Angular, and Node.js). This application will help the bakery handle its daily tasks more easily, such as tracking inventory and saving customer details. The frontend, made with Angular, will offer a simple and easy-to-use interface, while the backend, built with Node.js and Express, will ensure smooth running of all server functions. MongoDB will safely store all the data and make it simple to update and expand as the business grows.

This project aims to cut down on manual work and make the bakery's tasks more organized and hassle-free. It will also improve customer service by making processes faster and more reliable. In the future, the web application can include features like online ordering, delivery tracking, and customer reward programs, helping Murugan Biscuits Bakery grow and stay competitive in the market.
